

ELRO at work

HTW Berlin

«The excellent, practice-oriented support our cooks received during training by the ELRO instructors convinced us totally.»

H. J. Gabriel
Area Manager, Refectories
HTW Berlin

In the course of concentrating the Hochschule für Technik und Wirtschaft (University of Applied Sciences) in Berlin from five down to two locations in the center of the city, the kitchen situation was inspected closely – a real challenge given that the facility produces up to 3,500 hot lunches a day.

A top priority for refectories is being able to serve meals in a short time. But speed alone achieves little: Another important aspect is meeting the expectations of patrons in terms of high, diverse quality at the lowest possible price.

When it comes to the kitchen, the requirement profile in terms of quality and efficiency is dominated by factors such as fast cooking times, multifunctional appliances, pre-programmed cooking processes, energy-saving operation and fast cleaning. Important considerations in terms of economy and hygiene during operation and cleaning round off the planning specifications.

The experts at the K3 Planungsbüro Berlin and the HTW Berlin found the best solution in the state-of-the-art technology of the ELRO Series 2300 appliances. ELRO PMS (Power Management System) significantly reduces the total connected value when using the various pressure bratt pans and cookers. ELRO High-speed and ELRO CPMS (Cooking Process Management System) simultaneously increase the level of freshness in the preparation of vegetables and potatoes, while shortening cooking times and simplifying the control of the processes. And thanks to ELRO HPC (High Pressure Cleaning), appliances can be cleaned to meet the highest hygienic standards in the shortest time.

«The dependable, future-proof and solution-oriented operation of the appliances, as well as a design that promotes easy, hygienic cleaning impressed us early into the planning phase. Our daily experience using the appliances confirms that we made the right choice,» adds H. J. Gabriel.
